

Ideum Releases New Professional Level Integrated Multitouch Wall Display

CORRALES, New Mexico (Jan 17, 2012) Ideum has announced the release of its new MT65 *Presenter* multitouch wall display. The MT65 *Presenter* is a huge 65" interactive display with a 3D LCD, robust multitouch sensor, ultra-clear tempered glass, a powerful integrated computer, built-in audio, and webcam housed inside a hardened aluminum case.

The MT65 *Presenter* features a 65" 3D LCD display with full 1920x1080 HD resolution and flicker-free FPR 3D imaging that uses an LED backlight rated for 50,000 hours. The integrated touch sensor supports up to 32 simultaneous touch points. The 4" thin *Presenter* is protected by hardened 3mm tempered glass and a vandal-proof metal housing.

The integrated computer system is powerful and efficient. The CPU is a Hyperthreaded™ Quad Core Intel® Core™ i7 2720QM (6M cache, 2.2Ghz) with 8GB of RAM, 256GB SATA Solid State Hard Drive, and a discrete GeForce GTX 460 GPU.

The MT65 *Presenter* includes built-in WIFI, Bluetooth, and Ethernet connectivity. It also features stereo speakers, an external HD webcam with Carl Zeiss® optics and a stereo microphone. The *Presenter* has HDMI input/output that allows you to easily mirror the device's display, or it can receive input from another device.

An optional locking plate secures the *Presenter's* Ethernet, HDMI, 3.5mm Audio in/out, and USB 2.0 ports against unwanted access. Similar to Ideum's MT55 Series of multitouch tables, the *Presenter* features single-button operation. Just plug it in and turn it on.

"We design integrated systems that are easy to install and maintain, and that are practically indestructible, even in busy public environments," says Jim Spadaccini, CEO of Ideum. "The MT65 *Presenter* is perfect for public spaces, it has a huge LCD display that's over 2.5 times larger than Microsoft's Surface 2.0. It is also more than three times faster than the Surface and can work in just about any lighting environment."

The MT65 *Presenter* ships with a lifetime license for GestureWorks 3 SDK, and several demo applications. GestureWorks 3 for ActionScript provides streamlined authoring for multitouch tables, walls, kiosks, desktops, tablets, and embedded devices.

The *Presenter* is multitouch-enabled from start up and runs Windows 7 Professional 64-bit. A new Linux version, coming March 2012, will provide developers with new authoring and deployment options. Ideum's current line of multitouch tables, the MT55 *Platform* and *Pro*, will also be available with Linux support in March.

More information, high-resolution photographs, pricing, and specifications for the MT65 *Presenter* can be found at:
